SANAD 360 - Technical Proposal & Pitch Deck

Proactive Family Life-Event & Zero-Reject AI Agent
UAE Hackathon 2026 (Ajman - Sharjah)
Track: Rising Stars | **Theme:** Family-Centric Digital Society

---

1. Executive Summary & Challenge Alignment (25% Weight)

- **Official Challenge Addressed:** "How might we redesign digital government services around a family's life events such as a birth, a child starting school, moving home or caring for an elderly parent—ensuring families get what they need at the right moment, with fewer steps, information shared only once, and their data used safely and with consent?"
- **One-Sentence Summary:** Sanad 360 is a consent-based UAE PASS family agent and Vision-LLM pre-submission document validator that bundles government services around four core family life events (birth, starting school, moving home, and elderly care) using the "Once-Only" data principle to cut service steps by 75% and achieve 0% returned applications.
- **The Core Problem:** Families and senior citizens across the UAE face two connected barriers during major family life events:
    1. **Service Fragmentation** across 5 to 8 separate federal and local platforms requiring repetitive data entry.
    2. **Application Rejections & Delays** caused by missing stamps, expired records, blurry scans, or mismatched requirements when uploading supporting medical, school, housing, or MOFA attestation documents.

---

2. Three-Layer AI Architecture & Uniqueness Points (20% Weight)

Unlike passive chatbots, Sanad 360 operates as an active, privacy-preserving multi-agent system built on three integrated technical layers:

- **Layer 1 - Consent-Based Family Life-Event Triggers ("Once-Only" Engine):** Linked securely to the family's unified UAE PASS profile, Sanad 360 detects or anticipates key life events (a newborn registered at a hospital, a child reaching school age, a new tenancy contract in Sharjah, or an elderly parent's medical renewal). It automatically assembles all cross-entity transactions into a single one-click consent bundle without asking the family to re-enter data already held by government registries.
- **Layer 2 - Zero-Reject Vision-LLM Pre-Submission Document Validator:** Before any external attachment (medical report, birth record, tenancy contract, or "To Whom It May Concern" / MOFA attestation document) is submitted, an on-device/sovereign Vision-LLM scans the file in 3 seconds. It verifies required official stamps, image clarity, expiration dates, and name consistency against open government service catalogs, alerting the user to fix errors at the source and guaranteeing 100% first-attempt approval (0% returned applications).
- **Layer 3 - Assistive Emirati-Arabic Voice Companion for Elderly Parents:** A voice-first interface trained on the Emirati dialect that enables senior citizens and caregivers to request health renewals, home-care bookings, and official certificates completely by voice, with automatic caregiver notifications.

---

3. Open Data Utilization & Sovereign Privacy (20% Weight)

Sanad 360 grounds its life-event triggers and document validation rules in official UAE Open Data while strictly enforcing UAE Personal Data Protection Law (Federal Decree-Law No. 45 of 2021) via explicit per-transaction UAE PASS consent tokens.

Open Data Source / Portal	Dataset & Policy Scope	How Sanad 360 Uses the Data
Bayanat.ae (UAE Open Data Portal) https://bayanat.ae/en/Datasets	Population, Education Enrollment, and MOHAP/EHS Healthcare Datasets	Trains life-event demand forecasting (school enrollment waves, newborn & senior care capacity) across Sharjah and the UAE.
UAE Zero Government Bureaucracy https://u.ae/	Service Catalog Requirements, Attestation Rules & Once-Only Standards	Powers the Zero-Reject Vision-LLM rule engine to verify required stamps, attachments, and eligibility before submission.
UAE PASS Digital Identity https://u.ae/	Consent-Based Digital Vault & Digital Signature Framework	Enables single-click family consent, zero-storage identity verification, and cross-entity data sharing only once.

---

4. Business Model Canvas (BMC) - Rising Stars Deliverable

BMC Building Block	Sanad 360 Strategic Specification
1. Customer Segments	• UAE Families & Parents navigating birth, schooling, housing, and elderly care. • Senior Citizens requiring voice-first, zero-complexity access to health and social services. • Federal & Local Government Entities (TDRA, MOFA, MOHAP/EHS, SPEA, Sharjah Social Services).
2. Value Proposition	• **For Families:** 1-click life-event bundles ("Once-Only" data sharing) + 0% rejected applications via 3-second pre-submission AI document checks. • **For Government:** 70% reduction in manual document review workload and full alignment with Zero Government Bureaucracy targets.
3. Channels	• Native mini-app plugin inside UAE PASS and the official UAE Government Portal (u.ae). • Mobile application with Emirati-Arabic Voice AI for elderly parents.

BMC Building Block	Sanad 360 Strategic Specification
	• Smart kiosks in Sharjah Government Customer Happiness Centers.
4. Customer Relationships	• Proactive, consent-first automated life-event notifications. • 24/7 empathetic Arabic voice companion for senior citizens and caregivers.
5. Key Activities	• Fine-tuning Vision-LLM models on official document templates, stamps, and validity rules. • Orchestrating cross-entity API workflows for the 4 core family life events. • Continuous auditing for privacy, consent logging, and UAE PDPL compliance.
6. Key Resources	• Sovereign Vision-LLM & Emirati Dialect Speech-to-Speech AI models. • Open datasets from Bayanat.ae and government service requirement catalogs. • UAE PASS authentication and digital signature sandbox APIs.
7. Key Partners	• Telecommunications and Digital Government Regulatory Authority (TDRA) & UAE PASS. • Ministry of Family / Community Development, MOFA, EHS, and Sharjah Digital Department.
8. Cost Structure	• Sovereign cloud inference costs for Vision-LLM document scanning and Arabic Voice AI. • API integration, security testing, and accessibility compliance with government partners.
9. Revenue & Cost Savings	• **Direct Public Sector Savings:** Saves millions of AED annually by eliminating returned/re-submitted applications and manual counter checks. • **B2G SaaS Licensing & B2B API:** Annual licensing for government portals, hospitals, schools, and typing centers using the Zero-Reject Validator API.

5. 90-Day Execution Plan & Measurable Impact (15% Weight)

Phase & Timeline	Core Execution Milestones	Target Deliverable & KPI
Days 1-30 Build & Data Grounding	Ingest Bayanat.ae datasets and service requirement catalogs; train the Zero-Reject Vision-LLM to detect 10 common attachment errors (missing stamps, expired IDs, low resolution) and build the 4 life-event workflows.	Functional AI Validator MVP with 95% error detection accuracy in sandbox tests.
Days 31-60 Sharjah Field Pilot	Deploy a live pilot in Sharjah with 50 families (including senior citizens) and 1 government service center to test the "Birth, School, Housing & Elderly Care" bundles and Emirati Voice AI. Integrate consent-based triggers with UAE PASS sandbox APIs, finalize security/privacy audit under UAE PDPL, and present impact metrics to TDRA and Zero Bureaucracy teams.	0% returned applications across pilot families; 90% senior usability score.
Days 61-90 Scale & Handover	Expand integration across federal and local portals, transition pilot into an official government sandbox rollout, and hand over operational documentation to partner entities.	75% reduction in family service steps and completion time; ready for national rollout.
